

# Instruction manual

## Cones and covers Made of recycled plastic

Field of application:

1. Protection cover during construction work
2. Cone placed on riser pipe
3. Sunken cover in cone
4. Cone with insertion ring
5. Cover can be used as grate
6. Squared frame on cone

All cones and covers must be positioned so that the load is transferred to the area around the riser pipe or well. If the load is transferred to the riser pipe there is a chance that it will damage the construction.

The wings on the squared frame must be secured by concrete.

Cones, covers and insertion ring is made of recycled plastic, has a high strength and a low weight.

Load classes are as the following:

Cover Ø315 and Ø425: **3500 kg**

Cover Ø600: **200 kg**

Squared frame (secured by concrete): **3500 kg**

Cone Ø315, Ø425 and Ø600: **40 ton**
